Student Retention
What is Classroom Management?

Classroom Management is “the process of ensuring that classroom lessons run smoothly despite disruptive behavior by students. The term also implies the prevention of disruptive behavior.”

(source: http://en.wikipedia.org/wiki/Classroom_management)

- Disruptive behavior from one student distracts the focus of other students. It negatively impacts learning.

https://reflectionedu.wordpress.com/2012/06/01/classroom-management-adult-education/
Examples of Disruptive Behavior

Here are examples of disruptive behavior that I’ve seen from students:

- Being late for class
- Distracted by their mobile devices
- Chatting amongst themselves
- Interrupting the educator or other students
- Sleeping in class

</thead>
<tbody>
<tr>
<td>Autonomy</td>
<td>Learners are autonomous as they are in control of how they want to learn or present the information to their groups - expert and jigsaw.</td>
</tr>
<tr>
<td>Mastery</td>
<td>Mastery is accounted for as they need to be experts on their subject matter to be able to teach others.</td>
</tr>
<tr>
<td>Purpose</td>
<td>Purpose is fulfilled in that they are part of something larger. In order to get a full picture of what is being learned, they are driven to learn from other members in their group and to teach the other members.</td>
</tr>

Test Strategies
3 Tips to help Students to Learn
Share these tips with students

**Tip #1: Set the Expectation that Learning takes Time**
- To learn something (rather than memorize it and place it in short term memory) requires that students take the time to assimilate the information and reflect. (Learning TOOL—Admit/Exit Ticket).

**Tip #2: Plan for Learning—**
- Planning is key to staying on track with a course and learning. Day planners (electronic versions, even) can aid students in dedicating time to learning. Point out that they should have balance and plan time for family, friends, extracurricular activities, down time, or anything else they feel they need.

**Tip #3: Use effective learning techniques in each learning session**
- In each of the learning sessions, students should ...
  - review the material covered in the last session.
  - have a particular goal in mind of what they would like to accomplish.
  - skim the material to be covered in the current session.
YOU MATTER!

- Unless you Multiply yourself by the Speed of Light...

Then YOU are ENERGY
Those who can. Do.

- Those who can do more, TEACH!!
